

The steel pipe ramming technique with **GRUNDORAM**

GRUNDORAM

Principle sketch of the ramming technique

GRUNDORAM Setup

Advantages of the steel pipe ramming technique

- ➔ less disruption and damage of surfaces worth conserving (road surface, front gardens etc.) and minimal restoration – giving economic advantage
- ➔ low social costs because detours, half-sided barriers, etc. are avoided
- ➔ acknowledged pipe installation technique
- ➔ short setting-up times - short installation times
- ➔ the dynamic impact when ramming can shatter obstacles and easily overcome difficult starting resistance after standstill periods.
- ➔ The aiming accuracy is improved because the dynamic impact shatters various soil formations
- ➔ minimal covering, i. e. no large-scale pits
- ➔ simple operating technique
- ➔ adaptation to all pipe diameters with special ram cones
- ➔ wide application range

Ram Cone / Add On Cone

Lifting Equipment for Large Ram Cones

Ram Cones / Segmented Ram Cones / Soil Removal Cones

Comparison Add-on cone – Cotter segment

Soil Removal Adapter / Soil Removal Cone

Cutting shoe

Bentonite Cutting Shoe

Which GRUNDORAM for which Diameter ?

Soil Excavationn by Compressed Air only
